

LogiChain

An end-to-end platform connecting products, warehouses, and customers through seamless digital operations

Presented By

Kamlesh Shrikant Kasambe (250841220076)

Guided By

Mrs. Manjiri Deshpande

Addressing Modern Supply Chain Challenges

The Problem

Traditional supply chain systems struggle with fragmented workflows, lack of real-time visibility, and poor communication between stakeholders. Businesses face inventory inaccuracy, delayed shipments, and inefficient return processing.

Automated Workflows

Streamlined order processing from creation to delivery

Multi-Warehouse

Centralized management of distributed inventory locations

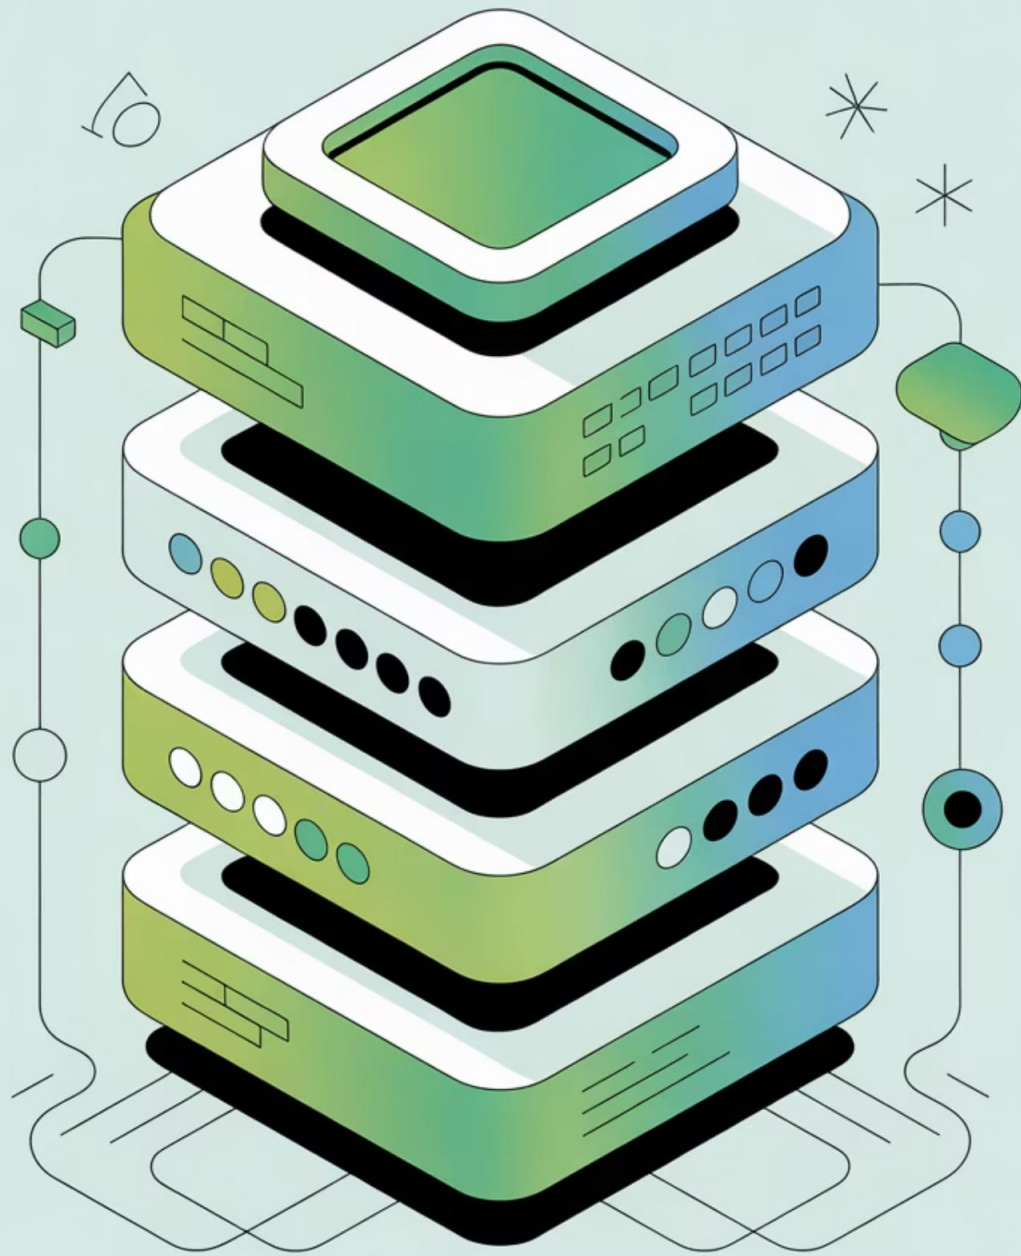

Real-Time Sync

Instant inventory and order status updates across all modules

Complete Visibility

End-to-end shipment tracking with real-time events

Robust Architecture Built on Modern Technologies

React Frontend

Responsive UI with React Router, Axios API calls, TailwindCSS styling, and React Toastify notifications

Spring Boot Backend

Business logic, JWT authentication, role-based security, RESTful APIs, and ModelMapper conversions

MySQL Database

Data integrity with encrypted passwords, stateless JWT tokens, and comprehensive validation

Enterprise-grade security includes BCrypt password hashing, CORS configuration, CSRF protection, and HTTP-only secure cookies for token storage.

Role-Based Access Control System

Five distinct user types with specific permissions ensuring data security and operational efficiency

Admin

Complete system oversight, user approval, product management, warehouse monitoring, and analytics configuration

Product Manager

Creates and manages product catalog with full CRUD operations, controls inventory stock levels, handles restocking

Warehouse Manager

Manages physical inventory, processes orders through lifecycle, creates shipments with real-time tracking

Customer Support

Reviews return requests, updates order statuses, manages queries, tracks shipments, monitors notifications

Customer

Browses products, places orders, tracks shipments, requests returns, and manages personal profile

Smart Product & Inventory Control

Product Management

Product Managers create products with SKU, name, category, price, weight, description, and images. The system supports categorization with search and filter capabilities. Unique Product Manager ownership ensures each manager only sees and controls their products through createdBy field filtering.

Stock Tracking

- **Total Stock:** Sum of available and reserved units
- **Available Stock:** Ready for immediate sale
- **Reserved Stock:** Allocated to pending orders

Real-Time Synchronization

Stock updates instantly across all modules, preventing overselling through available stock checks

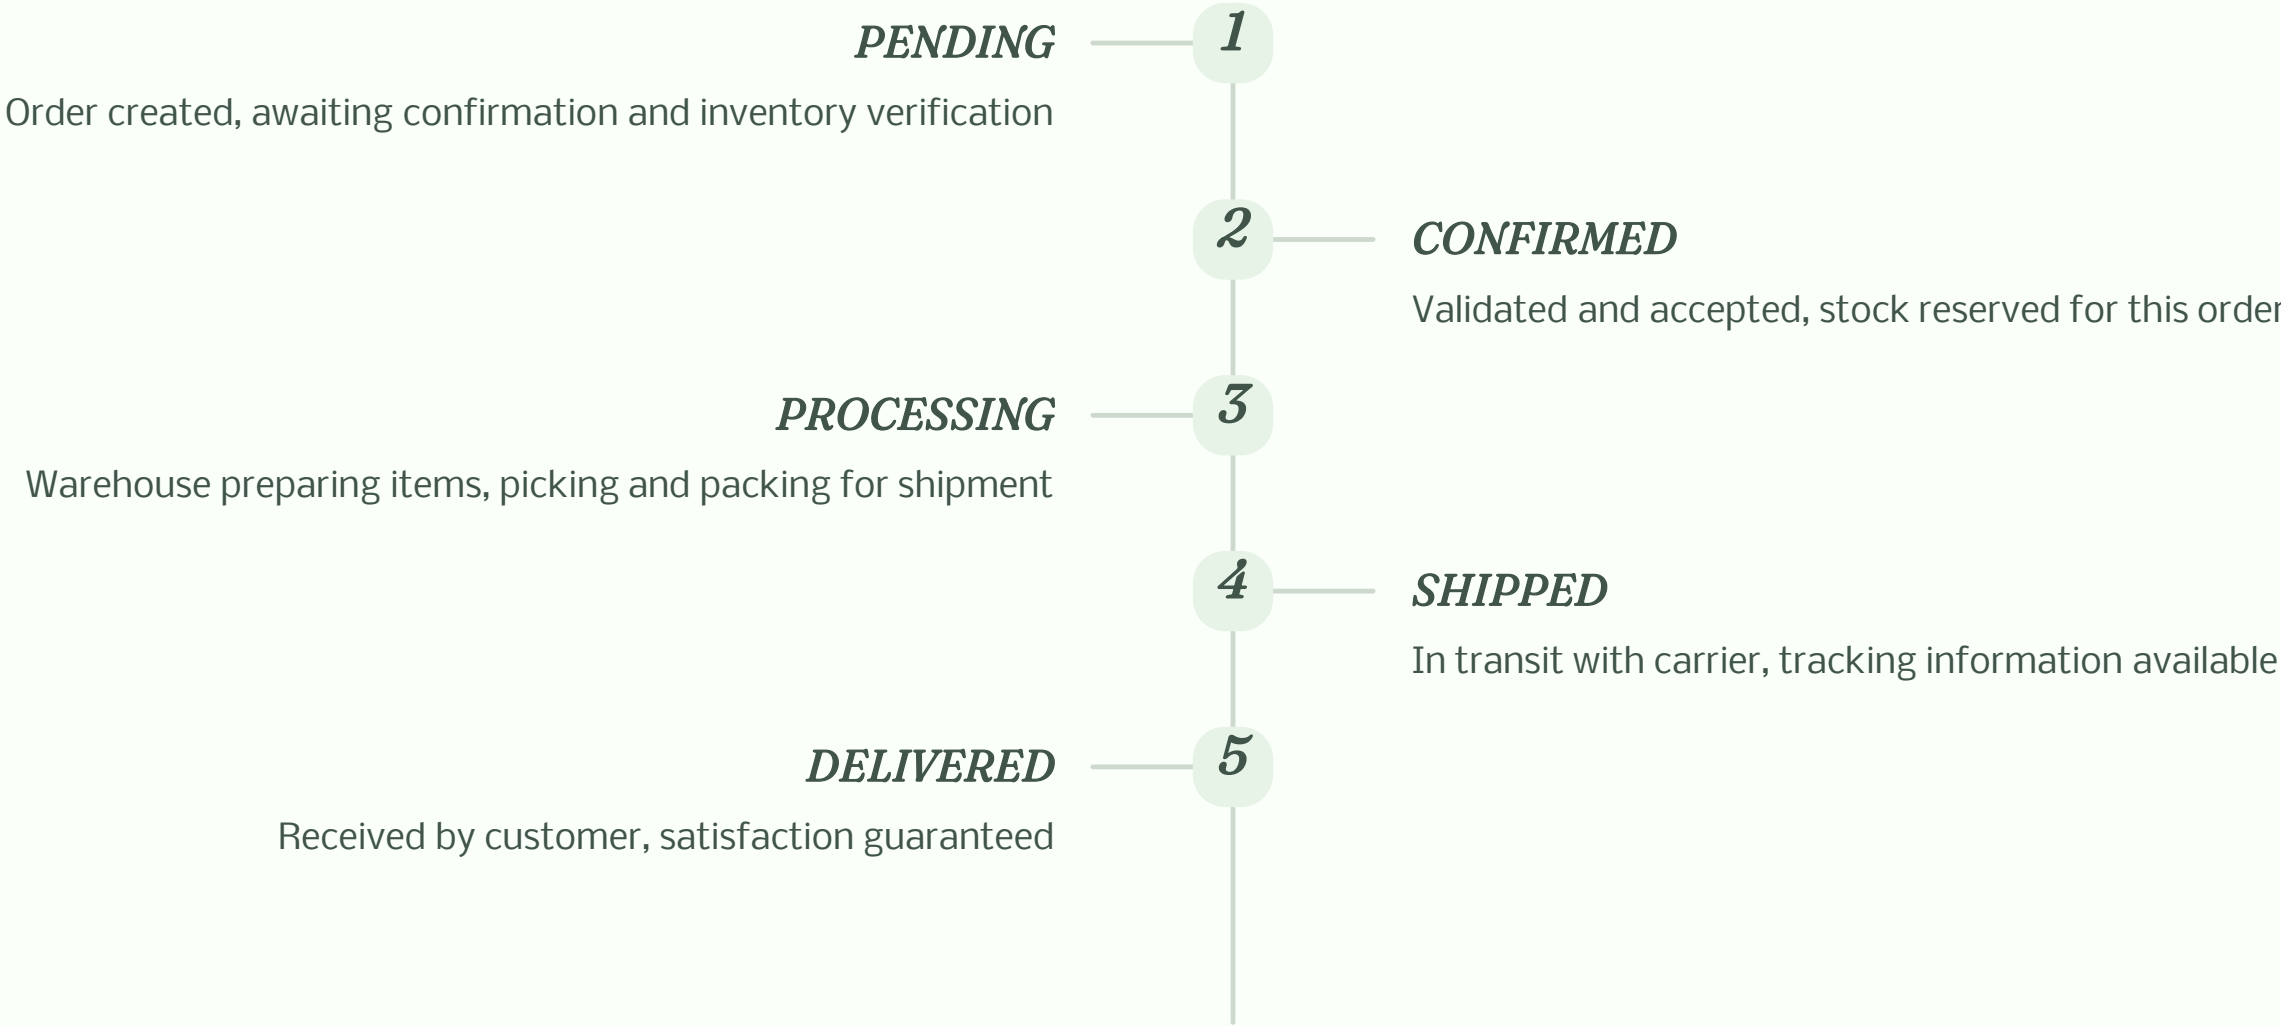

Multi-Warehouse Distribution

Same product across different warehouses with independent stock tracking and automatic aggregation

Low Stock Alerts

Dashboard displays products with less than 50 units remaining, triggering restock requests

Streamlined Order Processing Pipeline

Automatic Stock Reservation

System reserves required inventory when order is confirmed, preventing overselling

Unique Order Numbers

ORD-YYYY-NNNN format with automatic status tracking and payment integration

Real-Time Notifications

Customers informed at each status change through email, SMS, and in-app alerts

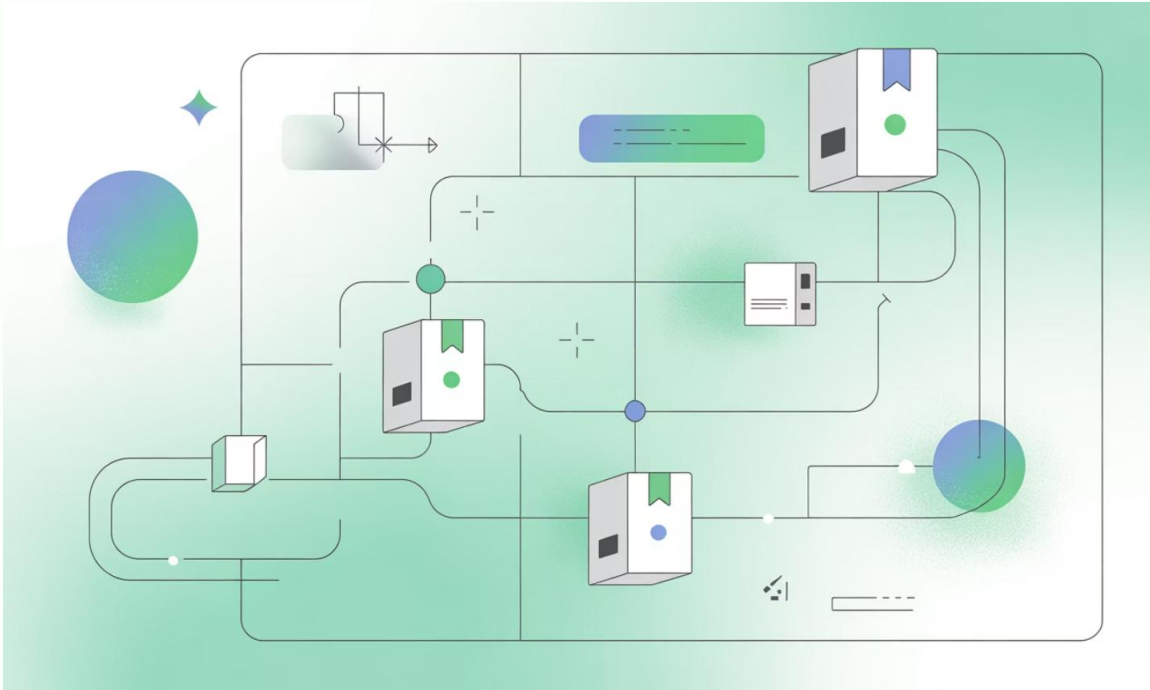

Real-Time Visibility Across the Supply Chain

Shipment Lifecycle

01	
CREATED	Shipment initiated with carrier selection
02	
PICKED_UP	Carrier collected package from warehouse
03	
IN_TRANSIT	En route to destination
04	
OUT_FOR_DELIVERY	Final mile delivery in progress
05	
DELIVERED	Successfully received

Multiple Carriers
FedEx, UPS, DHL, USPS, and more supported

Complete Audit Trail
Each tracking event captures timestamp, location, and description. Customers view detailed timeline with visual progress indicators and estimated delivery updates.

Unique Tracking
Auto-generated numbers for every shipment

Complete Return Processing Workflow

Customer Experience

Customers request returns for delivered orders by selecting reason: Defective, Wrong Item, Not as Described, Changed Mind, or Other. System auto-generates return numbers (RET-timestamp-orderID format) and calculates refund amount from original order total.

- Minimum 10-character description required
- Dynamic status badges show next steps
- Complete return history across all pages

Return Tracking
Full visibility into request status

Enterprise-Grade Security Implementation

JWT Authentication

Stateless sessions with secure token-based API access and automatic expiration

BCryptPasswordEncoder

Secure password hashing with salt rounds and token validation on every request

Spring Security

Role-based access control at method level with @PreAuthorize annotations

Registration & Approval

- Email verification required
- Password strength enforcement
- Role-based admin approval for Product Managers, Warehouse Managers, Customer Support
- Auto-approval for Customers

API Security

- CORS policy for React frontend
- CSRF protection for state changes
- HTTP-only secure cookies
- 401 Unauthorized or 403 Forbidden responses

Project Impact & Roadmap

60%

Time Reduction

Faster order processing vs traditional systems

99.5%

Inventory Accuracy

Real-time stock synchronization

5

User Roles

Complete role-based access control

100%

Visibility

End-to-end supply chain tracking

Future Enhancements

Mobile Applications

iOS and Android apps for on-the-go management

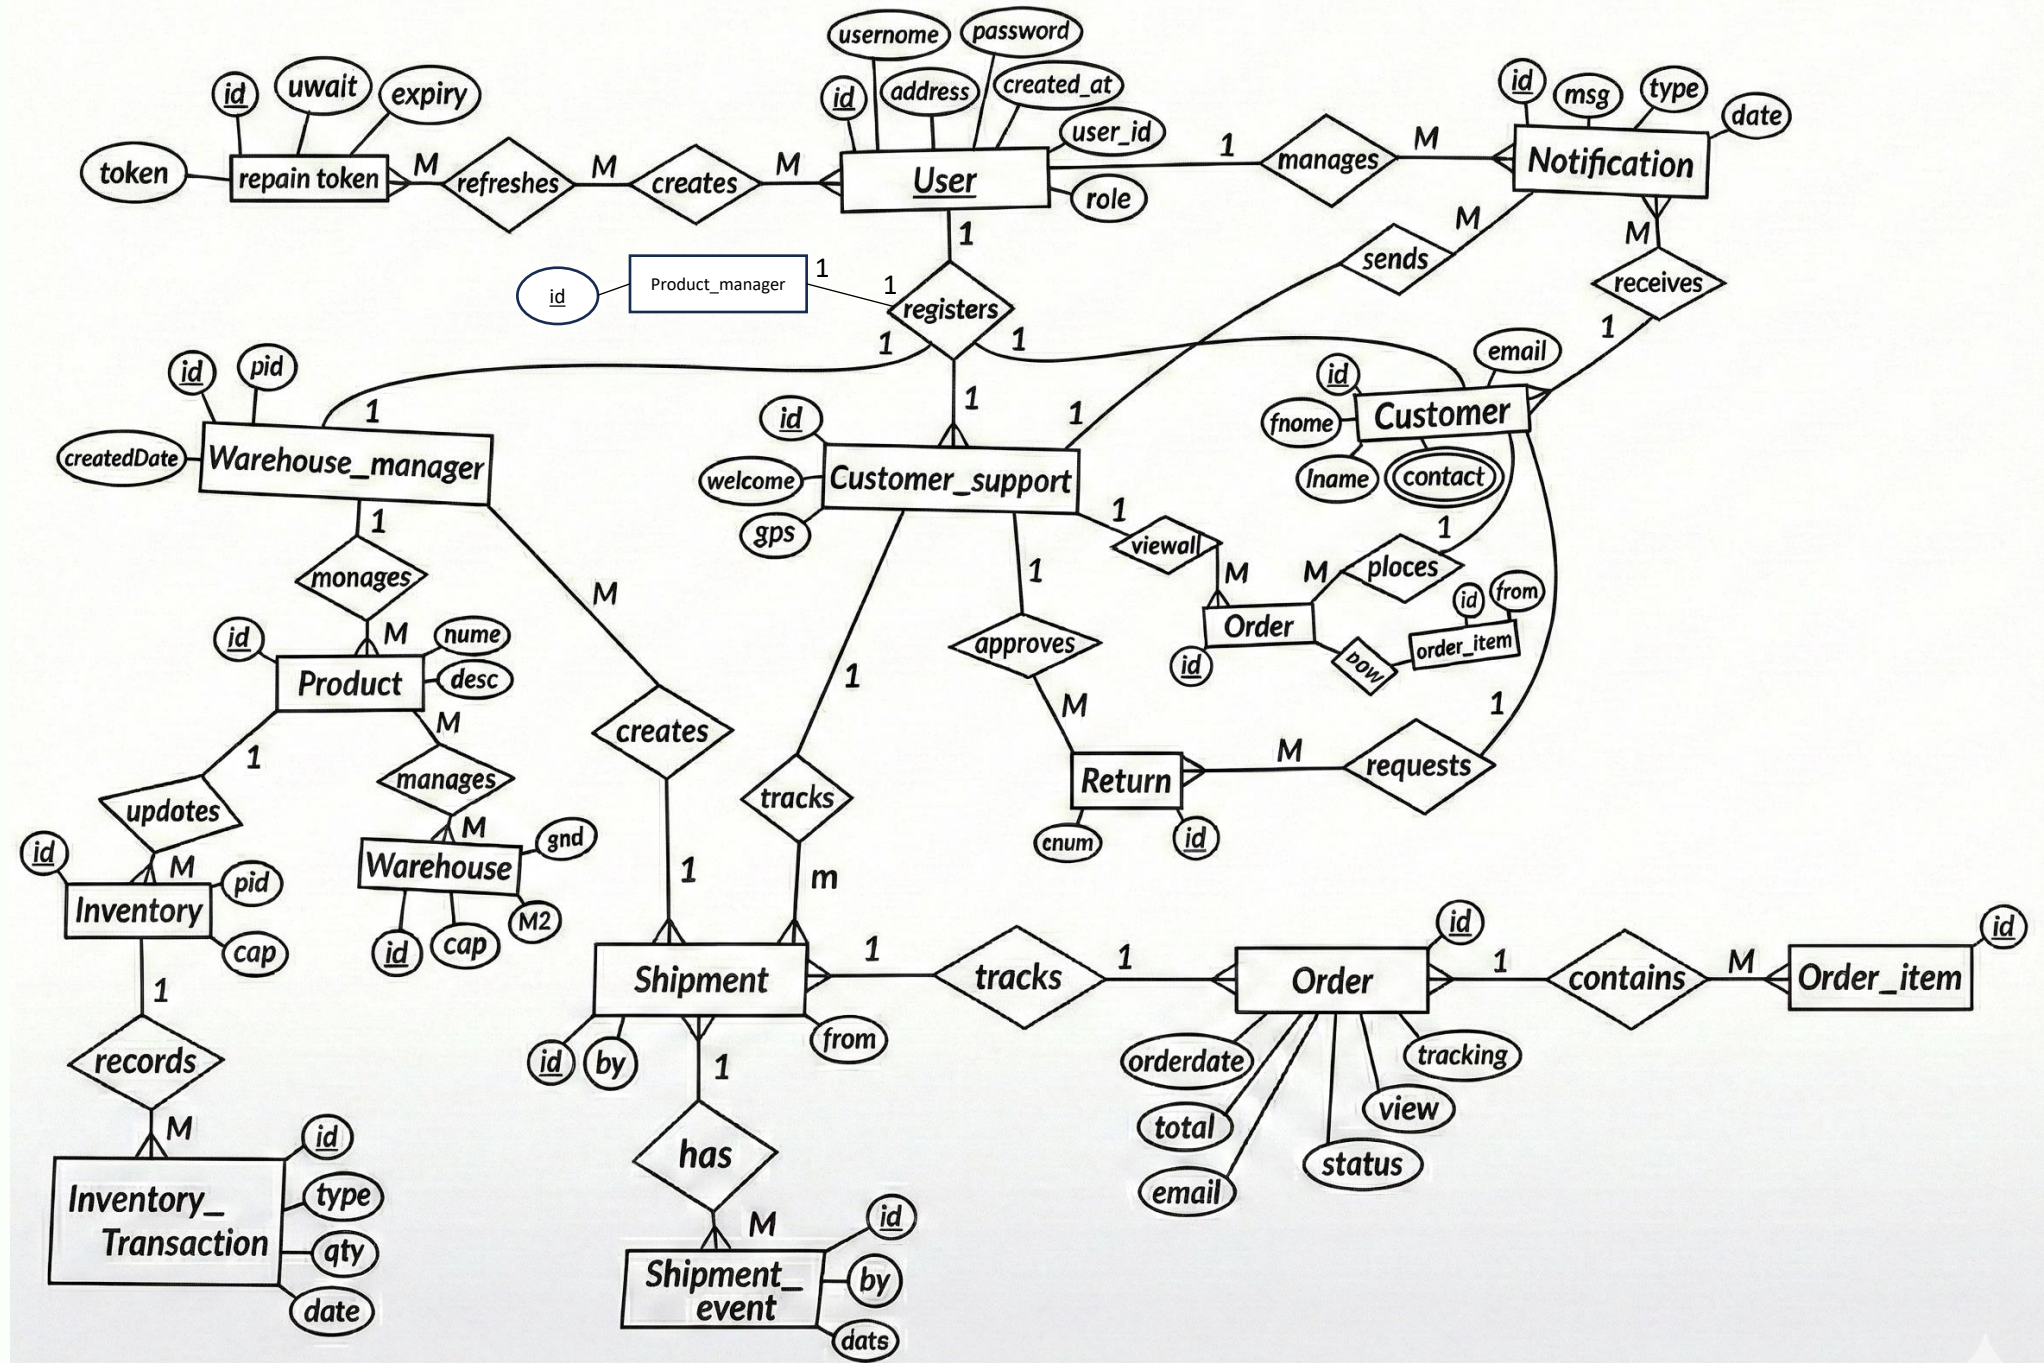

E-Commerce Integration

Connect with Shopify, WooCommerce platforms

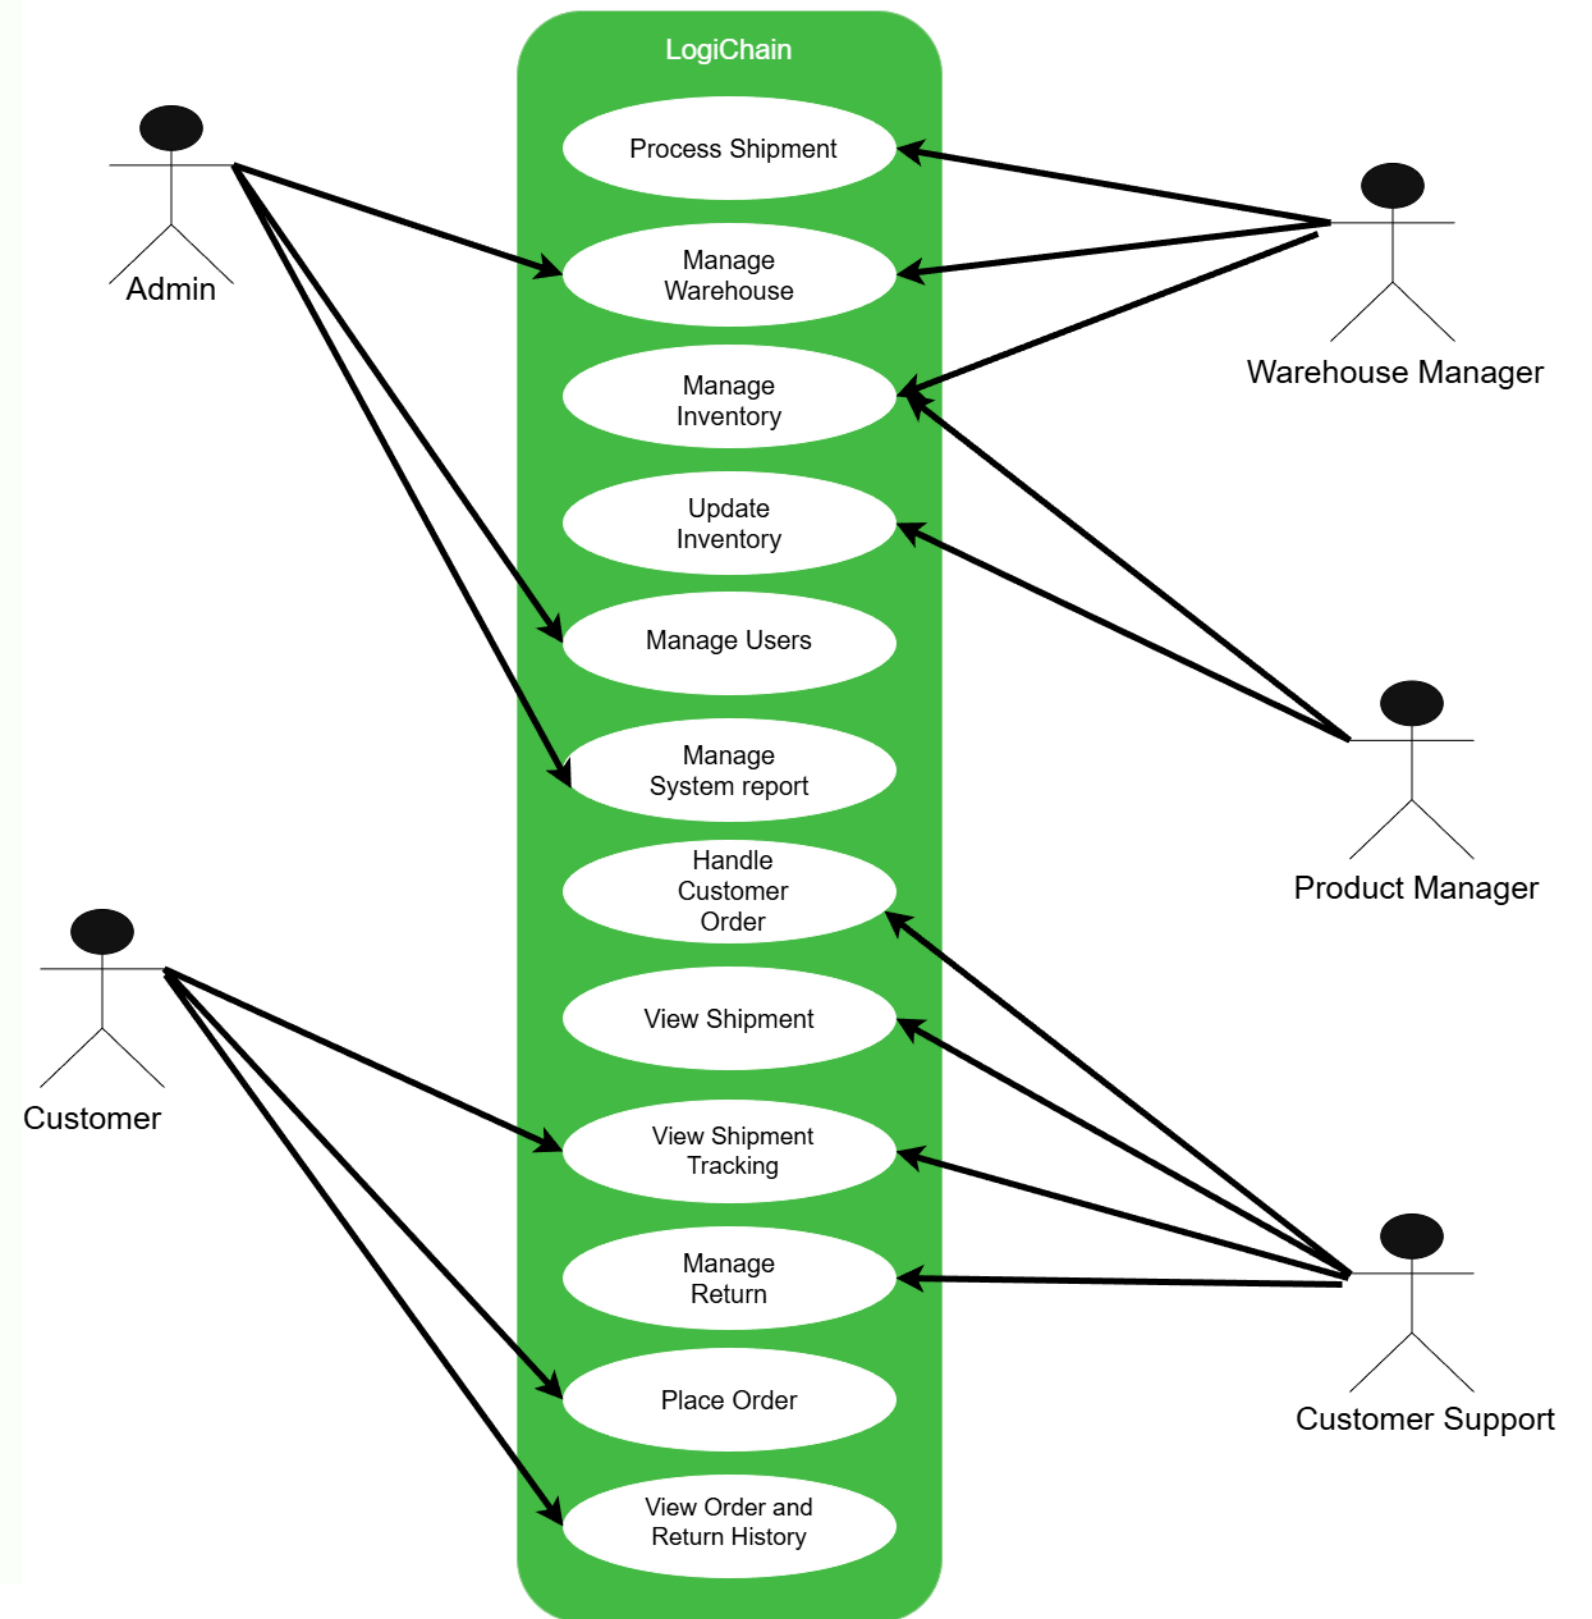

LogiChain demonstrates modern full-stack development practices, enterprise-level architecture, comprehensive security, and user-centric design—making it a robust foundation for supply chain digitization.

Real-Time Shipment Tracking & Inventory Management

Complete visibility across your entire supply chain. Track shipments, manage inventory, and streamline warehouse operations in one powerful platform.

[Start Free Trial](#)[Sign In](#)

Landing Page

Key Features

Real-Time Tracking

Track shipments from warehouse to customer with live updates and location tracking.

Inventory Management

Manage stock levels, warehouse operations, and get low-stock alerts automatically.

Analytics & Reports

Get insights into orders, shipments, and inventory with powerful analytics.
